Nvidia Profile Inspector 2.3.0.13 Crack +

Description: Features: [url] Nvidia Profile Inspector Crack Mac Logged SVC04 But the problem is that you can't use this program with any high end graphics card. I have an Nforce 7 motherboard and the auto profile tool crashes when I try to use it. In the profile inspector options the 'Nvidia Prime' engine crashes. That happens with my desktop too. It uses Nforce 7 too. I tried the new 64-bit version and it also crashes and that's the problem with the program. It is not a 64 bit problem. I did a lot of research before buying it, but the only thing I found out was that you have to make sure your video card is using the latest driver from nVidia. I just got it and it has the same problem, but I do have an Nvidia card. I tried the 64bit version and it doesn't crash but when I use the profile inspector it shows all the info in the profile tab, and if I check the GPU tab it says "GPU" for all my GPU's. I tried to take a screenshot of it but it only took a small square of the entire interface. I tried running it on another computer, and that worked fine, the only problem was that it didn't show any info on my motherboard. So I took out the hardware sensors and installed them back in and it's running fine. I was hoping the "CPU" tab would show my CPU speeds, but it's still reading as "GPU" in all the tabs. At this point I'm just trying to get the program to install and run on my computer. It is not a 64 bit problem.
